Delivery **Mon 09. Nov - Tue 10. Nov 2026**

Material:	Metal
Thick bridle:	16 mm

The olive-head bit is characterized by a fixed ring. Compared to a snaffle bit, the sides should fit about one centimeter closer to the corners of the mouth. The olive-head design prevents the corners of the mouth from getting pinched in the rings. The horse cannot push the bit up with its tongue, so the mouthpiece rests more calmly in the mouth and is stabilized slightly more from the sides. Since the ring does not rotate, the result is a slightly more direct action with a gentle influence on the neck. However, the difference from the snaffle bit is not noticeable to either the horse or most riders. The single-jointed mouthpiece sits more securely in the mouth than a double-jointed mouthpiece and distributes pressure across the horse’s cheeks; the center joint reduces pressure on the tongue. The olive head provides slight lateral stabilization and guidance, creating calmness and stability in the horse’s mouth.

Product information

Advantages at a Glance Effect

- Comfortable fit in the horse’s mouth
- Action on the horse’s cheeks, relieving pressure on the tongue

For which horses is this bit particularly suitable?

- For sensitive horses
- For horses still in training
- For horses that are somewhat restless in the mouth
- For horses that require minimal lateral stability

Note on Proper Use
Any bit can cause pain if used roughly or improperly. An incorrect size can also be painful for the horse. Feel free to contact us with any questions about sizing and fastening, or read more here about choosing the right size and the correct way to fasten the bit in the horse’s mouth.
