incl. 8,1% VAT plus Shipping

Delivery **Mon 09. Nov - Tue 10. Nov 2026**

Keralit Hoof Strengthener

- Strengthens and enhances the durability of the hoof horn
- The horn is stabilized in the area of the white line, the hoof wall, and the sole
- Indigestible to harmful bacteria and fungi
- Substances that break down the horn, such as ammonia or hydrogen sulfide, are neutralized
- Reduces horn wear in barefoot horses
- Hooves become significantly more stable and resilient

Application

- Before application, clean the hoof with a stiff, dry brush
- Best results are achieved when the hoof strengthener is applied to a dry or slightly damp hoof

Product information

- For barefoot horses, apply the hoof hardener from the outside to the lower third of the hoof wall, the frog, and the white line
- For sensitive horses, the hoof hardener should also be applied to the sole
- For shod horses, brush the product onto the lower third of the hoof wall, extending over both the old and new nail holes
- For shod horses, allow the liquid to run slightly over the shoe, which significantly reduces the degradation of the white line
- In acute cases, apply daily
- twice a week after improvement
- For prevention, use once a week
