incl. 8,1% VAT plus Shipping

Currently out of stock.

Color:	black
Size of Gaiters / Bell Boots:	L

The "THERAPEUTIC AIR HOCK" hock boots are equipped **with 10 magnets** that can **improve cellular function** and provide natural therapeutic support for the hock, as well as reflexology for the entire horse.

The permanent magnets used consist of a very strong neodymium alloy, iron, and boron with a nickel coating, and each can exert a magnetic induction of over **2,600 gauss**.

The special arrangement of the magnets, their flux density, intensity, and polarization were developed **in collaboration with veterinarians** and professional riders to maximize the **increase in localized vascular blood flow** and lymphatic circulation,

Product information

resulting in a variety of beneficial effects:

EFFECTS OF REFLEXOLOGY:
Through the use of reflexology—specifically, magnetic stimulation of the reflex points (Ting) on specific meridians of the horse (the same ones used in acupuncture)—moderate balancing effects are achieved. All effects of reflexology are published on our website www.zandona.net.

- The 3 magnets attached to the outside, in the immediate vicinity of the Yin BL (Bladder) meridian—Ting (BL58-60-64)—can have a positive effect on pain and circulatory disorders in the neck and spine.

- The two magnets attached on the inside, in the immediate vicinity of the Yang KI (Kidney) meridian—Ting KI2-7—can stimulate blood circulation by producing mild calming and anxiety-relieving effects.

LOCAL EFFECTS OF MAGNETIC THERAPY:
Unlike anti-inflammatory medications, which cause vasoconstriction (and thus slow down blood and lymphatic circulation, leading to a subsequent slowing of cellular processes), magnetic therapy can have a positive effect on pain and swelling, avoids the undesirable side effects of medications, and instead enhances regenerative processes:

- Pain-relieving effect
- Anti-inflammatory effect;
- Increased microcirculation in the cartilage
- Acceleration of lactic acid absorption
- Acceleration of the toxin elimination process
- Acceleration of the osteogenesis process
- Acceleration of cellular processes

TREATABLE CONDITIONS:

- Muscle, tendon, and cartilage injuries
- Ligament inflammation
- Fractures
- Osteoporosis.
