- Supports joints and tendons
- Stimulates the production of cartilage and synovial fluid
- For stressed joints, etc.
- For older horses

Powerful, comprehensive formula to support the joints Hyaluronic Cartilage by Officinalis is a high-quality dietary supplement for horses that provides a comprehensive formula to support joints and tendons. It contains the joint nutrients chondroitin and glucosamine in combination with devil's claw and stimulates the body's production of hyaluronic acid. With this unique composition, it can be used in many ways. **Ingredients: hyaluronic acid, chondroitin, glucosamine, devil's claw** Hyaluronic acid is a major component of synovial fluid and cartilage and is very important for joint mobility and lubrication. Cartilage requires an adequate supply of the joint nutrients glucosamine and chondroitin to produce hyaluronic acid. Chondroitin and glucosamine help maintain joint health. They stimulate the production of new cartilage cells and synovial fluid. Devil's claw is ideal for horses with stressed joints. **Quantity / Form:** 1000 ml / Liquid **Contents last for:** approx. 4–5 weeks (full-sized horse, maintenance dose) **Doping warning**: Although devil's claw is a purely natural plant extract, it is considered a doping substance by many equestrian sports associations! We recommend observing a withdrawal period of at least 4 days before a competition.
