193,60CHF

incl. 8,1% VAT plus Shipping

Delivery **Mon 09. Nov - Tue 10. Nov 2026**

Product information

Thick bridle: 16 mm

What makes these bits unique are the three different ways they can be fastened, allowing for individual use depending on the intended purpose and the horse’s level of training.

Fastening options:

1. When the bit is fastened as shown, it functions like a standard snaffle bit.
2. With this fastening method, gentle additional pressure can be applied to the neck when the reins are pulled.
3. With this fastening method, gentle pressure is applied to the tongue and lower jaw.

Dynamic RS bits are characterized by the ergonomic shape of the mouthpiece. They fit particularly well in the horse’s mouth; gentle pressure is distributed evenly across the tongue and the sides of the tongue, promoting optimal chewing. Dynamic RS bits encourage horses to accept the bit more quickly.
The ergonomically shaped mouthpiece allows for faster and more precise influence on the tongue. At the same time, Dynamic bits are very gentle on the mouth thanks to the fine, 45-degree-angled center piece.
The curved shanks of the mouthpiece ensure that the bit always remains in the correct position in the horse’s mouth. The fine olive (center piece) can apply pressure centrally to the tongue. Reins signals are conveyed precisely to the horse. The bit fosters the horse’s trust in the rider’s hand and enhances safety.
