Carbon Gel Vento is a gaiter developed in **collaboration with Marcus Ehning** that provides dual ventilation. Heat emitted by the horse's leg passes through the layer of micro-perforated neoprene and is then distributed through the channels of the 3D mesh fabric. **Fresh air enters** through the **ventilation opening** and directs the heat upward toward the exhaust grille. **Ventilation thus occurs both horizontally and vertically**. **Protection of the tendons is** ensured **by the carbon** in combination with a **shock-absorbing film made of Nitrex gel**. The **lining made of faux fur**—a synthetic material containing no animal-derived substances—offers the horse exceptional comfort and is also aesthetically pleasing.
