The heat emitted by the horse’s leg penetrates the layer of micro-perforated neoprene and is then distributed throughout the channels of **the 3D mesh fabric**. Fresh air enters through the ventilation opening and carries the heat upward to the exhaust grille. **Ventilation thus occurs both horizontally and vertically. Protection of the tendons is** ensured **by the carbon** in combination with a **shock-absorbing film made of Nitrex gel**. The **inner lining**, made **of faux fur**—a synthetic material free of animal-derived substances—offers the horse exceptional comfort and is also aesthetically pleasing.
