Color: black

Our bestseller!
The saddle pad with medical-grade lambskin is the perfect pad for riding. Unlike a standard saddle pad, this pad has pockets at the front and back that can be individually padded to balance the saddle.
Lambskin is hypoallergenic and antiseptic. This means that even horses with sensitive skin can wear a saddle pad. In addition, the lambskin promotes blood circulation in the horse's muscles. Thanks to its natural texture, the fur massages the horse's back while riding. Medical-grade lambskin also prevents heat buildup. Thanks to its natural structure, the fur regulates temperature, and horses do not start sweating as quickly under the lambskin. A saddle pad made of genuine lambskin also has the special property of retaining its shape. This means that the lambskin regains its shape after every ride. The saddle pommel pads exert very localized pressure and compress the lambskin. Despite sweat, the shape is retained. Even when the saddle rests on the lambskin and the fur

Product information

is compressed by the jolts during riding, high-quality lambskin does not come apart but retains its shape and is merely compressed. As a result, the pad is highly shock-absorbing, adapts anatomically to the horse, and prevents pressure points or chafing. Such saddle pads are very gentle on the horse’s back.

- Saddle pad with medical-grade lambskin
- two insert pockets at the front and back
- includes insert pads
- Fur trim at the front and back
- shaved chamber channel
- Machine washable at 30°C

Size: M = approx. 55 cm, L = approx. 62 cm (back length incl. lambskin)
Material: genuine medical-grade lambskin
Weight: 0.7 kg
Color: black/natural

lambskin Use
A saddle pad with genuine lambskin is often used in show jumping or eventing. The lambskin protects against strong impacts from the rider. Sensitive horses in particular need natural products in the back area so they can move without pressure or restriction.
In addition, the pad features insert pockets to help correct the saddle’s position. These insert pockets allow the saddle’s position to be individually adjusted if the saddle sits too low in the front or back. Possible reasons for this may include changes in the horse’s musculature, or the fact that the saddle does not fit optimally.

Care Instructions
: Natural materials are sensitive to chemicals. The more often lambskin is washed, the more it loses its natural properties and also begins to shed. Once the lambskin has dried, simply brush it out with a brush. If you do decide to wash the saddle pad, use a special lambskin detergent and wash the pad at 30°C. Remove the inserts beforehand.
