Product information

The Comfort Lambskin Girth features the same cut as our best-selling Soft Leather Comfort Girth. The breastplate is significantly wider to optimize pressure distribution. The sides are narrow so as not to restrict the horse’s freedom of movement.
Why use lambskin? For one thing, it is hypoallergenic and antiseptic, meaning even horses with sensitive skin can wear it. In addition, lambskin promotes blood circulation in the horse’s muscles. Thanks to its natural structure, the fur actually massages the muscles while riding. Furthermore, medical-grade lambskin prevents heat buildup. Thanks to its natural structure, the fleece helps regulate temperature, and horses do not start sweating underneath it as quickly. A genuine lambskin girth also has the special property of retaining its shape. This means that the fleece returns to its original shape after every ride. It retains its shape even when wet with sweat.

• Anatomically shaped
• Genuine lambskin
• Textile girth
• Suitable for sensitive horses
• Washable at 30°C
• Better pressure distribution

Additional Information
Sizes: 50, 55, 60...80 cm
Material: Fabric and medical-grade lambskin
Weight: 0.7 kg
Color: black, natural lambskin

Uses of the Comfort Short Girth with Lambskin
The Comfort Short Girth with lambskin is, of course, suitable for sensitive horses. For one thing, the wide breastplate helps make the girth more comfortable for the horse overall. For another, the lambskin ensures even better pressure distribution and air circulation than other materials when worn by the horse.
Lambskin girths are often used for sensitive horses, which typically react sensitively to pressure. Lambskin distributes pressure evenly and comfortably like no other material. As described above, genuine lambskin offers many benefits when used.
However, one thing to keep in mind with lambskin is the stability of the saddle. If the horse generally has trouble with the saddle slipping or shifting to the side, it can be difficult to use a lambskin girth. This is because lambskin girths can never be buckled as tightly as those made of other materials, since the lambskin always acts as a springy buffer between the horse’s body and the girth.
