incl. 2,6% VAT plus Shipping

Delivery **Mon 09. Nov - Tue 10. Nov 2026**

Chondroitin – Support for Joints and Cartilage Chondroitin is a natural component of connective tissue and plays a key role in the health of cartilage, tendons, and ligaments. In equine nutrition, chondroitin is specifically used to support joint function and promote mobility, particularly in older horses or those involved in competitive sports. Our high-quality chondroitin is sourced from carefully selected sources and is characterized by particularly high bioavailability. When combined with glucosamine, chondroitin can be even more effective and help support the regeneration of joint structures. You'll find chondroitin combined with glucosamine and MSM in our Tri-Flex!
Benefits at a Glance:

- Supports cartilage formation and regeneration
- Promotes joint mobility
- Ideal for sport horses, senior horses, and horses with joint problems
- Well-tolerated and easy to dose
- Not subject to anti-doping regulations

Product information

Feeding recommendation:
Horses (500 kg): 5 g per day (One measuring spoon = 5 g)
Small horses / ponies: Adjust dosage according to weight
Dogs / cats: Mix
1/2 measuring spoon into the food for every 15 kg of body weight
