REVsport, 17'5" seat, without saddle flaps

Art.Nr.: ST-REVsport / manufacturer:

2.800,00CHF

incl. 8,1% VAT incl. Shipping

Currently out of stock.

Product information

Color: black

Discover the "REVsport" now—the perfect choice for riders with athletic ambitions. This saddle model is an evolution of the REV saddle and stands out for its even more intense connection between rider and horse. The lateral support at the seat bone pads provides additional stability and enables precise aid application. The clean lines and dynamic design underscore this saddle’s athletic focus.

Unique modularity—maximum comfort

Whether for long trail rides, jumping, or dressage, this saddle combines the various equestrian disciplines into a single model. In just a few simple steps, the saddle flaps can be easily swapped out using a special snap-button mechanism. The innovative saddle tree ensures maximum comfort for both horse and rider. The rider’s contoured seat is separated from the horse’s anatomically adapted contact surface by a horizontal “U” shape, thereby providing the desired cushioning effect. Despite the two levels, the rider remains close to the horse and can use the usual aids. Two different positioning options for the stirrup leathers allow for the perfect leg position in various disciplines. The dressage panel has a narrow cut and features a large pad at the front. The show jumping panel is cut wider at the front and, in addition to a soft front pommel and a small calf block, offers the option of a Velcro pommel for added support. The trekking panel is cut wide and offers plenty of legroom. The large pommel also guarantees the necessary support when riding cross-country.

Unbeatable fit and pressure distribution:

The patented and award-winning saddle tree was developed by Martin Ryan to distribute the forces generated while riding as evenly as possible across a larger, full-surface contact area on the horse’s back. Unlike traditional saddle trees, the REV features a continuous support surface along the horse’s back from front to back, making it suitable for a wide variety of horse backs. The flexible panels in the rear section of the saddle tree allow for maximum freedom of movement. The shock-absorbing spring action reduces jerky and potentially uncontrolled movements to protect the horse’s back over the long term. As soon as the rider sits in the saddle, the saddle chamber opens slightly, relieving pressure on the horse’s front, so that the horse’s shoulders can rotate freely. In exceptional cases, the saddle tree can be easily adjusted to accommodate a very high withers or a very broad horse’s back by simply screwing in gusset wedges for a better fit.

Who is this saddle suitable for:

The REV saddle is an absolute must-have for riders who are looking for variety and do not want to commit to a specific discipline. Thanks to its innovative saddle tree, the REV is particularly well-suited for sensitive horse backs that require even pressure distribution and load distribution while riding. This makes the REV the ideal choice for riders who want to enjoy even longer, more comfortable, and more varied rides with their horse. The REV is also in high demand among ambitious professional riders who want to enhance their horse’s performance over the long term by providing greater freedom of movement in the shoulders, relieving pressure on the back, and ensuring optimal pressure distribution.

Technical Specifications:

- Three different saddle panels available (dressage, jumping, and trekking)
- Adjustable to wide, regular, and narrow seat widths using seat-width wedges
- Available in seat size 17.5"
- Wool padding
- Three-point V-girth
- Double pommel (allows for stirrup positioning for dressage or jumping)
- Weight of REVsport saddle without saddle flaps: 4.6 kg
- + 1.6 kg pair of jumping saddle flaps (including Velcro loops)
- + 1.3 kg pair of dressage saddle flaps
- + 1.4 kg pair of trekking saddle flaps

Schedule a no-obligation appointment for a test ride with this unique saddle!
