240,80CHF

incl. 8,1% VAT incl. Shipping

Delivery **Mon 09. Nov - Tue 10. Nov 2026**

The BOW BALANCE stirrup combines several key features that contribute to safe and enjoyable riding.
By altering the weight distribution compared to previously available stirrups, the BOW BALANCE—as the name implies—is optimally balanced. Thanks to both its unique
balance and the curved shape in the upper part of the stirrup, it fits even better against the horse and is therefore easier to step into.
An extra-wide and therefore comfortable footplate features two different rubber hardnesses, which provide more grip and act as shock absorbers.
The proven System-4 hinge can help the foot release in the event of a fall. Significantly improved flexibility reduces strain on the rider’s hips, knees, ankles, and calves.
The rubber side panels result in a slightly narrower stirrup width.

Product information

The advantages of the Sprenger Bow Balance

stirrups: • Curved shape for perfect
positioning • System-4 joint for comfort and maximum
safety• high
strength• insole with two different rubber hardness levels for better grip•
protects joints and ligaments•
