Product information

New Soft'Up Pro

Art.Nr.: D-F04397 / manufacturer: Freejump

329,00CHF / Couple

incl. 8,1% VAT incl. Shipping

Delivery **Mon 09. Nov - Tue 10. Nov 2026**

Product information

Safety

- Freejump has been a leader in the field of technical safety stirrups since 2005. The stirrups in the Soft'Up line offer the best safety on the market for several reasons.
- The flexible, open outer leg made of Elastollan® is designed to open under pressure, making it easier for the foot to slip out in the event of a fall.
- The design of the main shank supports quick release of the foot without causing it to get caught.
- The lower section of the outer leg is reinforced to withstand the forces that occur during abrupt turns or awkward movements.
- The angled eyelet provides better balance and stabilizes the rider's position.

Shock Absorption & Performance

- The single-sided spring steel structure absorbs up to 30% of the forces acting on the stirrups and is complemented by an elastomeric damping element that functions like a true shock-absorption system. This relieves stress on the rider's joints as well as the horse's back.
- The offset center of gravity naturally promotes a lower heel position, thereby improving stability and balance.

Sustainability & Customization

- Thanks to its well-thought-out design, the new SOFT'UP PRO combines durability with repairability and is 100% recyclable. This ensures reliable performance, a long service life, and high environmental standards.
- The metal studs provide optimal traction and can be replaced to maintain grip over the long term.
- The SOFT'UP PRO can be customized and combines technical performance with a unique look.
