incl. 8,1% VAT plus Shipping

Delivery **Mon 09. Nov - Tue 10. Nov 2026**

Material:	Plastic
Thick bridle:	15 mm

The NATHE Underlay Bit is back—and it’s come with an upgrade! We’ve replaced the plastic joints with stainless steel and angled them forward by 45°, which prevents pressure on the palate. With single-jointed bits, when the horse accepts the reins, increased pressure is applied to the sides of the tongue while the center of the tongue is relieved of pressure. The high-quality thermoplastic has a smooth surface, is food-safe, and is free of plasticizers and solvents. In addition, thermoplastic is temperature-neutral, making the bit comfortable for the horse even in cold temperatures.

- Made of high-quality thermoplastic
- smooth surface, no “eraser effect”

Product information

- gentle on the mouth Joints made of stainless steel and angled 45° forward
- increased pressure on the edges of the tongue and the lower bars
- Direct and precise action inside the horse’s mouth
- Made in Germany

- Thickness 15 mm
