- contains 70% delicious & juicy Swiss chicken
- contains hemp with naturally occurring CBD
- help promote calmness in stressful everyday situations
- are free of grains and wheat and contain no sweeteners

Net weight: 200 g

Natural single-protein snack for dogs, also suitable for special everyday situations

Product information

Many everyday situations can cause stress in dogs. Thunderstorms, fireworks, vet visits, moving, and being left alone are examples of such situations. This can cause your dog to start trembling, panting, whining, barking, growling, or even chewing on objects.
SPARROW CannaRelax® Snacks for Dogs naturally contain valuable herbs that are traditionally believed to have a positive effect in helping your dog cope with everyday anxiety.
The herbs in these snacks can help restore balance to your dog's emotions.

70% juicy chicken from Switzerland

The main ingredient in SPARROW CannaRelax® Snacks is 70% protein-rich, low-fat chicken raised in animal-friendly conditions. Dogs love this high meat content because they are primarily carnivores. They can also perceive the umami flavor much better than we humans can. The umami flavor is found primarily in protein-rich foods, such as chicken. Dogs prefer this flavor because it best reflects their nutritional needs.
ANIMALS mean a great deal to us—including farm animals. Switzerland has one of the strictest animal welfare laws and the strictest animal transport laws in the world. This also ensures more animal-friendly husbandry methods, including free-range and outdoor access, which promote animal well-being. That's why we use Swiss meat.

Swiss Quality – Single Protein

In SPARROW CannaRelax® Snacks, we deliberately use only high-quality meat from Switzerland because we care deeply about all animals. Our snacks are produced in Switzerland, and thanks to our innovative manufacturing process, we are able to guarantee the highest quality.
Chicken is the sole source of animal protein. We do not mix different types of meat. This follows nature's example, as in the wild, an animal would never consume multiple types of meat at once. The easily digestible, high-quality, and low-calorie potato is the sole source of carbohydrates. We deliberately avoid fillers such as corn, wheat, or soy, and we use only natural antioxidants (natural vitamin E, rosemary) as preservatives.
Thanks to the semi-moist chunks and our innovative manufacturing process, we can completely avoid artificial flavor enhancers and other artificial additives or fillers, as our carefully selected, natural ingredients already provide the flavor that dogs love to eat.
We also avoid genetically modified ingredients, and the treats are guaranteed to be produced without animal testing.
Furthermore, we select only raw materials that are sustainably sourced and cultivated to high-quality standards.
Your dog will not only love these natural and juicy chunks—they'll also be good for him.

Semi-moist dog treat – Innovative manufacturing process

The tasty and juicy ingredients are processed using a special, innovative manufacturing process. This ensures that all the natural and essential nutrients are gently preserved. As a result, SPARROW snacks are a valuable treat for adult dogs, offering maximum bioavailability and excellent digestibility.
Thanks to the gentle cooking and air-drying of the meat, it remains beautifully juicy and flavorful, with a residual moisture content of 20%. This gives the treats a pleasantly soft texture. This is how SPARROW Snacks achieve a natural flavor that dogs love. These semi-moist snacks, packed with meat, are much easier to digest than conventional dry snacks. A daily treat for your beloved dog.
The soft texture and high residual moisture also have the advantages of reducing tartar buildup and promoting better dental care than conventional dry treats. Contrary to popular belief, dry treats do not clean teeth any better. The dry pieces tend to get stuck between the teeth and cannot be easily removed by the dog on its own. The dry pieces from conventional snacks can thus lead to more plaque, tartar, and bad breath.
