Currently out of stock.

Size of Gaiters / Bell Boots: L

Over 5 years of research and development—patented—100% made in Germany: the first compression stocking that really delivers! EQUI compress uses optimal pressure and efficient compression, starting at the horse’s hoof, to stimulate the circulatory system and accelerate metabolism. The Problem
: Unlike humans, who have well-developed calf muscles, horses have only tendinous extensions extending upward from the hoof. The advantage: rapid acceleration during flight behavior—the disadvantage: the lack of a muscle pump slows the return of metabolic waste products toward the heart. This transport occurs via the lymphatic system, which runs parallel to the circulatory system. Near the heart, the lymph then drains into the veins. If the lymphatic system is not fully functional, proteins, for example, cannot be removed, and tissue hardening develops. Our sport horses are primarily kept in stalls. The result: natural metabolism is impaired. Prolonged standing therefore promotes disease and leads to injuries. The horse recovers more slowly, and structures such

# Product information

as muscles, ligaments, and tendons are more susceptible to injury. The Solution This is where the EQUI compress compression stocking comes in, applying compression at precisely predetermined points with the required pressure. This brings the vascular valves closer together, stimulates the lymphatic system, and creates an effective pumping action. Thus, EQUI compress has a prophylactic, long-lasting effect and, for the first time, offers measurable benefits to sport horses and all horses that find themselves standing for extended periods due to specific circumstances.

What exactly does the EQUI compress compression system do?

- Compression starting at the coronet band and moving toward the heart
- Increased blood flow velocity
- Prevention of blood clots
- Closure of the lymphatic valves
- Accelerates the removal of metabolic waste products
- Decongestion of the extremities
- Fascia stimulation
- Relief of flexor tendons through optimal pressure
- Compression on the horse's leg (scientifically proven, patented, made in Germany)
- No slipping thanks to anti-slip design
- Pumping action during rest periods
- Antibacterial thanks to silver ions & ideal for skin problems
- Cooling effect thanks to CoolBreathe
- Easy to care for & dirt-repellent

Uses:

- Ideal for rest periods, stabling, and light work
- During transport and at competitions
- Used specifically after periods of exertion to speed up recovery
- Between training sessions
- For galling and swollen legs
- Tendon problems
- Mud fever

Contraindications:
Do not use EQUI compress if:

- open wounds
- bacterial infections
- fungal infections
- Circulatory disorders
- acute phlegmon
- Fever
- (Venous disorders and heat-related conditions)

What's Included:
Two stockings and two compression gaiters for your horse's front legs, as well as a wash and storage bag. Sizes: The Equi compress Set is available in sizes S, M, L, and XL. To find the right size, please use the measurement instructions and size chart.
Care Instructions: Machine washable at a maximum of 30 °C in the included wash bag. Not suitable for the dryer. The Velcro fasteners on the gaiters must be securely fastened before washing to prevent damage to the fabric.
