- Ring size 70 mm

Product information

Do you want to visibly—and tangibly—improve your horse’s chewing ability? This working bit with a copper center piece provides consistent and even pressure across the entire tongue. At the same time, the copper element promotes acceptance in the horse’s mouth and stimulates natural saliva flow.
The bit provides comfort that satisfies even sensitive horses with delicate mouths. Made from high-quality thermoplastic, our Nathe bits are not only hypoallergenic but also temperature-resistant and dimensionally stable.
The side-mounted bit discs gently protect the corners of the mouth. Overall, the bit is gentle on the mouth and supports sensitive communication.
