A long design meets high-end materials:

Product information

The WHEATON not only provides riders with reliable protection from wind and cold in the winter, but also offers exceptional tactile sensitivity for a delicate connection to the horse’s mouth.
And because this highly functional riding glove incorporates a particularly high proportion of recycled materials and components, it bears the “High Recycling Ratio” seal of quality.

An outer layer made of WINDSTOPPER® material by GORE-TEX LABS provides effective wind protection, keeping hands and fingers comfortably warm even during longer rides and training sessions.

The palm, made of highly breathable, tactile, and durable MICRO-AIR®, ensures a reliably non-slip grip on reins and equipment. Clever:

The material is slightly pulled over the index finger on the back of the glove, further optimizing the grip. The ROECKL-exclusive COMFORT-CUT, which eliminates the need for a cuff on the index finger .

Another highlight is the slim, elasticated design that extends well past the wrist and reliably traps heat inside the glove.
The Eco lining made from recycled polyester and a soft cuff made from Eco Stretch Fleece provide perfect protection against the cold.

The WHEATON is TOUCHSCREEN COMPATIBLE, so you can keep it on while typing and swiping on your smartphone.

It’s also machine-washable at 30 degrees, so it’s quickly clean and ready to use. Available in classic black with reflective design elements and the Roeckl Sports logo, and made without leather.
