Size of the bit:	12.5 cm
Thick bridle:	14 mm

Advantages of the “EASY CONTROL” Pelham:

- More effective control due to the bar’s action only in the direction of pull—while the outer parts of the bit remain flexible sideways
- More effective, mouth-friendly aids
- Easier and faster communication between horse and rider
- Optimal control even with minimal rein pressure, ideal for horses that resist the hand
- “EASY CONTROL” Pelhams have proven themselves in show jumping, where it is often difficult to get horses to slow down before a jump.
- When using bits that are too sharp, horses often become too cautious and fail to build up enough speed. This negative effect does not occur with the “EASY CONTROL” Pelham.

Product information

- “EASY CONTROL” Pelhams exert a strong influence on the horse via the bar action when needed. However, as soon as the horse accepts the rein aids, the bit feels soft and comfortable on the tongue and bars.
- The “EASY CONTROL” bit allows the rider to exert more precise control over the horse with less rein pressure.

Advantages of the Pelham:

- Can be ridden with two or one rein
- Pulling and levering effects can be applied in a controlled manner as needed

Advantages of the Pelham side pieces:

- The distinctive feature of the Stübben STEEL tec Pelham side pieces is their short shanks.
- The short shanks allow for a quicker response with short rein movements.
- This rapid response is very helpful in show jumping, especially during quick turns.
- The flat stainless steel chin chain hooks fit more comfortably and prevent pinching of the lips.
- The special chin strap hooks also make it easier to adjust the chin strap.

Stübben STEELtec quality:

- No sharp edges that could injure the horse’s mouth
- Long-lasting durability thanks to carefully selected materials
- Special manufacturing techniques minimize wear on the ring holes and joint connections of the bits
