Currently out of stock.

Six different strains of lactobacilli help stabilize the gut flora and promote digestion.

- stabilizes the gut flora
- promotes digestion
- with 6 different lactobacilli (probiotics)
- After deworming

Lactobacilli to protect the intestinal flora and promote digestion

Product information

Activa 6L by Officinalis is a dietary supplement for horses containing 6 different lactobacilli that stabilize the gut flora and promote digestion.

Lactobacilli reduce the risk of pathogens and fungi colonizing the gut. They regulate the pH level of the digestive tract and promote the synthesis of various vitamins. They can also mitigate the effects of an unbalanced diet.

Numerous Uses for Activa 6L

Activa can be used in many different situations. For underweight or finicky horses, it can support nutrient absorption. It can also be added to the diet in cases of loose stools, watery stools, or bloating. The use of Activa 6L is recommended following the administration of medications that damage the gut flora (e.g., deworming treatments, antibiotics).

Furthermore, Activa is a valuable supplement for horses that frequently travel to competitions or stay in stables. In these situations, horses can quickly be exposed to harmful bacteria, or their digestive systems can be stressed by travel. Activa supports the immune system and promotes digestion.
