incl. 8,1% VAT plus Shipping

Currently out of stock.

Natural gel with devil's claw for a horse's joints, tendons, and muscles. It has anti-inflammatory and pain-relieving effects for joint and muscle pain.

Artiglio Gel by Officinalis helps horses with conditions such as osteoarthritis and spavin, among others. The gel is applied to the affected joint and provides a warming, anti-inflammatory effect. Joint conditions can worsen and become very painful, especially in winter or when the air is damp. This is where Artiglio Gel provides relief. This gel can also be used for muscle tears or muscle tension. Its circulation-boosting effect helps initiate the healing process and can help release muscle blockages.

The devil’s claw extracts in the patented Officinalis Artiglio 90% Gel are distinguished by their anti-inflammatory properties. The four extracts (water, glycerin, alcohol, and liquid devil’s claw extract concentrate) enhance its effectiveness.

Product information

Directions: Clean the area to be treated (joints, back, ankles, and knees), apply a pea-sized amount, and massage the gel in for 2 to 3 minutes until it is completely absorbed. Do not apply to open wounds.
