- For acute tendon, ligament, and joint problems
- Pain-relieving and anti-inflammatory
- For tendonitis, strains, contusions, and bruises
- Promotes blood circulation
- Also aids in recovery after strenuous work

Clay paste for acute tendonitis, strains, swelling, and bruises

Product information

The main ingredient in Officinalis' Cretatat arnica is kaolin, also known as white clay. It has a high silicon content (40–50%). Silicon is essential for healthy tendons and ligaments. The other highly concentrated minerals, such as potassium, iron, and magnesium, are necessary for healthy bones and muscles.

Clay neutralizes viruses and bacteria, thereby preventing their spread. It has a disinfecting effect on sore spots and accelerates skin regeneration. It promotes blood circulation and thus stimulates healing.

Arnica and Mint—Double the Power Against Pain and Inflammation

Arnica officinalis cretata has anti-inflammatory, pain-relieving, and circulation-boosting properties. Combined with mint, it refreshes and revitalizes tendons, ligaments, and joints. Mint and arnica provide double the effectiveness against inflammation and pain throughout the musculoskeletal system. These two time-tested medicinal plants relieve the pain of acute inflammation in tendons and joints and accelerate the healing process.

It is especially recommended for acute tendonitis, strains, swelling, and bruises.
