Product information

Optibeets, 20 kg

Art.Nr.: O-OPTIB.20 / manufacturer: Optimera

41,55CHF

incl. 2,6% VAT plus Shipping

Delivery **Mon 09. Nov - Tue 10. Nov 2026**

Container Size: 20 kg

Optibeets, which swell rapidly when exposed to water, are made from desugared and broken-down beet pulp. The non-lignified plant cells provide an ideal, high-quality feed for horses and deliver approximately the same amount of digestible energy as grain flakes. This gentle form of energy from highly digestible crude fiber does not make horses hyperactive. Optibeets can be fed to any horse. Since it does not contain carbohydrates of the type found in grain flakes, Optibeets can also be used in cases of Cushing’s disease, laminitis, tying up, etc. The extremely low glycemic response also makes Optibeets an ideal feed for endurance horses.

- Highly caloric—for training and competition
- Electrolyte and water reservoir
- Ideal for endurance
- For young horses (fewer joint problems, OCD, etc.)

Product information

- Sales prepping (preparation for sale or auction)
- Low in carbohydrates and therefore suitable for horses with tying-up issues (PSSM) or metabolic syndrome
- Suitable for HYPP (Hyperkalemic Periodic Paralysis) because the potassium content is very low (
