| Thick bridle: | 14 mm |

They are a further development of the KK ULTRA bits, whose center piece—or joint—is angled 45° forward in the middle, thereby utilizing the tongue’s sensitive sense of touch.

Thanks to their ergonomic shape, rein aids are transmitted more precisely to the horse’s mouth. The pressure triggered by the rein aid is distributed across the entire tongue, which acts as a cushion in the mouth.
The mouthpiece fits perfectly into the contours of the tongue and mouth, ensuring precise and effective contact. When used

# Product information

correctly, Dynamic RS bits promote a trusting contact—even with sensitive horses.

- The ergonomic shape ensures even pressure distribution across the tongue; the shank is angled 45° forward
- sits anatomically correct between the tongue and the palatal arch, allowing for effective aid delivery
- Also ideal for sensitive horses or horses with a fleshy tongue
- Direct transmission of rein aids to the tongue and lower jaw via a fixed side piece
- Stays stable in the horse’s mouth, gentle on the corners of the mouth
- Lateral support aids in riding turns, especially for horses that tend to break out over the shoulder
